Metro Ethernet (Networking Technology) Sam Halabi

The definitive guide to enterprise and carrier metro Ethernet applications

- Easy to read and understand, following the style of the best-selling Internet Routing Architectures
- Understand emerging metro Ethernet services such as point-to-point packet-leased line services and multipoint-to-multipoint VPLS
- Learn to scale your Ethernet LAN beyond the enterprise wall and across a geographically dispersed virtual private campus
- Understand the drivers and the challenges that carriers face in transforming the metro to address data services
- Understand the different metro deployment models using SONET/SDH, next-generation SONET/SDH, Ethernet over SONET/SDH (EOS), virtual concatenation, Generic Framing Protocol (GFP), and Resilient Packet Ring (RPR).
- Examine the VPLS model and how MPLS can extend an L2 service across the MAN and the WAN
- Learn about the characteristics of a GMPLS architecture

Metro networks have emerged as an area of growth for the networking industry and represent a major shift in how data services are offered to businesses and residential customers. This is not only a technology shift but also a shift in the operational and business models that will allow incumbent carriers to transform the metro to offer enhanced data services.

Ethernet has been the technology of choice for the enterprise and is now emerging as the access interface of choice for delivering data services in the metro. Emerging metro Ethernet services include packet-leased line services and virtual private LAN service (VPLS). These services are delivered over a wide mix of metro transport technologies such as SONET/SDH, next-generation SONET/SDH, Ethernet/WDM, and Resilient Packet Ring. With the simplicity, flexibility, and cost effectiveness of Ethernet networks comes the challenge of scaling Ethernet Layer 2 (L2) services over metro and WAN deployments.

Metro Ethernet looks at the deployment of metro data services from a holistic view. It gives a description of the current metro, which is based on TDM technology, and discusses the drivers and the challenges to be faced in transforming the metro to address data services.

Metro Ethernet discusses the mix of transport technologies deployed in the metro and the migration strategies that metro operators will adopt in moving from today's SONET/SDH network to an all-Ethernet network. You'll learn about the VPLS model and how you can use MPLS to extend an L2 service across the MAN and the WAN. You'll explore traffic engineering and how you can use RSVP TE to increase the reliability and availability of the metro service. Finally, you will examine an emerging MPLS technology called Generalized MPLS (GMPLS) and how it is used to facilitate the operation and deployment of metro networks. GMPLS presents a major shift in the operation and configuration of transport networks and will tremendously influence the future deployments of metro and WAN networks.

This book is part of the Networking Technology Series from Cisco Press(r), which offers networking professionals valuable information for constructing efficient networks, understanding new technologies, and building successful careers.

From reader reviews:

Micheal Taylor:

Do you one among people who can't read gratifying if the sentence chained in the straightway, hold on guys this kind of aren't like that. This Metro Ethernet (Networking Technology) book is readable by means of you who hate those straight word style. You will find the information here are arrange for enjoyable looking at experience without leaving possibly decrease the knowledge that want to provide to you. The writer regarding Metro Ethernet (Networking Technology) content conveys the idea easily to understand by lots of people. The printed and e-book are not different in the content material but it just different available as it. So , do you nevertheless thinking Metro Ethernet (Networking Technology) is not loveable to be your top record reading book?

Thomas Burke:

This book untitled Metro Ethernet (Networking Technology) to be one of several books that will best seller in this year, this is because when you read this e-book you can get a lot of benefit into it. You will easily to buy this kind of book in the book store or you can order it by means of online. The publisher with this book sells the e-book too. It makes you quickly to read this book, because you can read this book in your Smart phone. So there is no reason for your requirements to past this reserve from your list.

James Floyd:

Are you kind of hectic person, only have 10 or even 15 minute in your morning to upgrading your mind talent or thinking skill possibly analytical thinking? Then you are experiencing problem with the book compared to can satisfy your short period of time to read it because this time you only find reserve that need more time to be learn. Metro Ethernet (Networking Technology) can be your answer because it can be read by you actually who have those short extra time problems.

Jennifer Lewis:

In this time globalization it is important to someone to acquire information. The information will make you to definitely understand the condition of the world. The condition of the world makes the information much easier to share. You can find a lot of personal references to get information example: internet, paper, book, and soon. You can observe that now, a lot of publisher this print many kinds of book. Often the book that recommended for you is Metro Ethernet (Networking Technology) this guide consist a lot of the information from the condition of this world now. This kind of book was represented how does the world has grown up. The dialect styles that writer require to explain it is easy to understand. Typically the writer made some study when he makes this book. Honestly, that is why this book ideal all of you.
