**Quantum Kinetics in Transport and Optics of Semiconductors (Springer Series in Solid-State Sciences)** Hartmut Haug, Antti-Pekka Jauho

The state-of-the-art of quantum transport and quantum kinetics in semiconductors, plus the latest applications, are covered in this monograph. Since the publishing of the first edition in 1996, the nonequilibrium Green function technique has been applied to a large number of new research topics, and the revised edition introduces the reader to many of these areas. This book is both a reference work for researchers and a self-tutorial for graduate students.
