## **Sustainable Energy in China: The Closing Window of Opportunity (Directions in Development)**

Noureddine Berrah, Fei Feng, Roland Priddle, Leiping Wang

China's remarkable economic growth has been supported by a generally adequate and relatively low-cost supply of energy, creating the world's largest coal industry, its second-largest oil market, and an electric power business that is adding capacity at an unprecedented rate. However, in fueling that impressive economic growth, the energy sector has increasingly stressed the natural environment, placed heavy demands on domestic energy sources, and exposed the country to risks of dependence on foreign petroleum supplies. If energy requirements continue to double every decade, China will not be able to meet the energy demands of the present without seriously compromising the ability of future generations to meet their own energy needs.

This title uses historical data from 1980 and alternative scenarios through 2020 to assess China's future energy requirements and the resources to meet them. It calls for a high-level commitment to develop and implement an integrated, coordinated, and comprehensive energy policy. The authors recommend eight building blocks to reduce energy consumption growth well below the targeted rate of economic growth, to use national resources on an economically and environmentally sound basis, and to establish a robust energy system that can better ensure the security of a diverse supply of competitively priced energy forms. Sustainability calls for persistence of effort, greater reliance on advanced energy technologies, and better standards enforcement.

Achieving these goals will require policy initiatives that restrict demand and create a 'resources-conscious society', reconcile energy needs with environmental imperatives, rationalize pricing, and tackle supply security. While the challenges are daunting, China has a unique opportunity to position itself as a world leader in the application of cutting-edge energy developments to create a sustainable energy sector effectively supporting a flourishing economy and society.

**From reader reviews:**

**Gerald Warfield:**

Information is provisions for anyone to get better life, information presently can get by anyone from everywhere. The information can be a knowledge or any news even a problem. What people must be consider while those information which is in the former life are challenging to be find than now could be taking seriously which one is appropriate to believe or which one typically the resource are convinced. If you obtain the unstable resource then you get it as your main information there will be huge disadvantage for you. All of those possibilities will not happen with you if you take Sustainable Energy in China: The Closing Window of Opportunity (Directions in Development) as the daily resource information.

**Marilyn Leonard:**

The publication with title Sustainable Energy in China: The Closing Window of Opportunity (Directions in Development) contains a lot of information that you can learn it. You can get a lot of help after read this book. This kind of book exist new information the information that exist in this guide represented the condition of the world right now. That is important to yo7u to learn how the improvement of the world. This book will bring you with new era of the glowbal growth. You can read the e-book with your smart phone, so you can read the idea anywhere you want.

**Mellisa Holden:**

The book untitled Sustainable Energy in China: The Closing Window of Opportunity (Directions in Development) contain a lot of information on the item. The writer explains your ex idea with easy technique. The language is very straightforward all the people, so do definitely not worry, you can easy to read it. The book was written by famous author. The author brings you in the new age of literary works. You can read this book because you can read on your smart phone, or device, so you can read the book in anywhere and anytime. In a situation you wish to purchase the e-book, you can open their official web-site as well as order it. Have a nice study.

**Catherine Cote:**

As we know that book is very important thing to add our understanding for everything. By a reserve we can know everything we wish. A book is a range of written, printed, illustrated as well as blank sheet. Every year has been exactly added. This guide Sustainable Energy in China: The Closing Window of Opportunity (Directions in Development) was filled in relation to science. Spend your spare time to add your knowledge about your science competence. Some people has different feel when they reading a new book. If you know how big selling point of a book, you can experience enjoy to read a publication. In the modern era like now, many ways to get book which you wanted.
