Thin Film Micro-Optics: New Frontiers of Spatio-Temporal Beam Shaping Ruediger Grunwald

"Thin-film microoptics" stands for novel types of microoptical components and systems which combine the well-known features of miniaturized optical elements with the specific advantages of thin optical layers. This approach enables for innovative solutions in shaping light fields in spatial, temporal and spectral domain. Low-dispersion and small-angle systems for tailoring and diagnosing laser pulses under extreme conditions as well as VUV-capable microoptics can be realized. Continuous-relief microstructures of refractive, reflective and hybrid characteristics are obtained by vapor deposition technologies with shadow masks in rotating systems. The book gives a comprehensive overview on fundamental laws of microoptics, types of thin-film microoptical components, methods and constraints of their design, fabrication and characterization, structure transfer into substrates, optical functions and applications. Recent theoretical and experimental results of basic and applied research are addressed. Particular emphasis will be laid on the generation of localized, nondiffracting few-cycle wavepackets of extended depth of focus and high tolerance against distortions. It is shown that the spectral interference of ultrabroadband conical beams results in spatio-temporal structures of characteristic X-shape, so-called X-waves, which are interesting for robust optical communication. New prospects are opened by exploiting small conical angles from nanolayer microoptics and self-apodized truncation of Bessel beams leading to the formation of single-maximum nondiffracting beams or "needle beams". Thin-film microoptical beam shapers have an enormous potential for future applications like the two-dimensional ultrafast optical processing, multichannel laser-matter interaction, nonlinear spectroscopy or advanced measuring techniques.

If you want to try look for book, may be the book untitled Thin Film Micro-Optics: New Frontiers of Spatio-Temporal Beam Shaping can be very good book to read. May be it can be best activity to you.

Benjamin Manno:

You are able to spend your free time to study this book this publication. This Thin Film Micro-Optics: New Frontiers of Spatio-Temporal Beam Shaping is simple bringing you can read it in the playground, in the beach, train in addition to soon. If you did not have got much space to bring the printed book, you can buy the actual e-book. It is make you easier to read it. You can save the particular book in your smart phone. So there are a lot of benefits that you will get when one buys this book.

Sylvia Dozier:

As we know that book is very important thing to add our know-how for everything. By a guide we can know everything we wish. A book is a range of written, printed, illustrated as well as blank sheet. Every year has been exactly added. This book Thin Film Micro-Optics: New Frontiers of Spatio-Temporal Beam Shaping was filled in relation to science. Spend your extra time to add your knowledge about your research competence. Some people has several feel when they reading some sort of book.
